Which of the following is an example of a datapoint that the construct "reach" would examine?	◯ Did the intervention achieve the objective? ◯ What were the health outcomes of those participating in the intervention? ◯ How acceptable was the intervention by the population? ◯ What were the characteristics of those participating in the intervention?
What is adoption within the Reach, Effectiveness, Adoption, Implementation Maintenance (RE-AIM) framework?	◯ The degree to which an intervention is implemented as intended ◯ The ability to implement an intervention without changes to the core components ◯ The decision to make full use of an innovation, intervention or program as the best course of action available ◯ Approaches or techniques used to enhance the implementation, sustainment and scale-up or spread of evidence-based interventions
Which of the following RE-AIM measures would be best to evaluate if your stakeholders are most interested in whether the intervention continues to be implemented in subsequent years?	◯ Reach ◯ Effectiveness ◯ Implementation ◯ Maintenance
